
PROFESSIONAL SUMMARY

- Over 8 years of professional experience developing Responsive Cross Platform User Interface using **HTML5, CSS3, SCSS, JavaScript, jQuery, Bootstrap, Angular, PHP, Java**
- Strong domain knowledge of Finance and eCommerce and Educational
- Proficiency in developing Model View Controller (**MVC**) based Single Page (**SPAs**) using various JavaScript frameworks like **Angular, NodeJS**
- Experience in working with **RESTFUL** Web Services, implementing **RESTFUL APIs**, and applying the latest software development approaches including MVC, event driven applications using **AJAX**, Object Oriented (OO) JavaScript, **JSON** and **XML**.
- Experience in Database Technologies including RDMBS like Oracle, **MySQL**, and **NoSQL** like **MongoDB**.
- Experience in front - end tooling workflows **Node JS** (NPM), Bower, Gulp and Grunt.
- Skill in handling unit testing using Jasmine, Selenium, Firebug, Protractor, Chrome/safari web inspectors and IE Developer Toolbar, NVIDIA, Axe with Test-Driven Development (**TDD**) and Behavior-Driver Development (**BDD**) methodology
- Expert in **version control tools** like **GIT** and **SVN**; build tools like Maven and Gradle; continuous integration tools like Jenkins, Go CD, and issue-tracking platform like JIRA, RTC and Rally
- Expertise in developing **SOAP, RESTful Webservices and APIs with JSON and XML**
- Strong understanding and experienced with all the phases of **SDLC** and agile development methodologies
- Experienced working in an Agile-based SDLC environment and participating in different Scrum sessions
- Experience in developing PHP based applications using **WAMP (Window, MYSQL, PHP, Apache)**, also worked on multiple Content Management tools like Joomla, WordPress, ModX, Magento, Drupal.
- Excellent interpersonal abilities, communication skills, time management collaboration & team building skills Experienced in working in **AGILE based development environment** and participating in **Scrum sessions**.
- Acquaintance in applying the latest development approaches including **MVC framework** in the browser, event-driven applications using Ajax, single page applications using **Angular JS** and **Bootstrap**.
- Expertise in coding optimized **SQL** queries on databases like **My SQL, SQL Server, and Oracle**.
- Worked on IDEs like **Microsoft visual studio**, Sublime text, **IntelliJ**, Web Storm, and **Eclipse**.
- Experience in developing web applications using MVC, MVVM, MVP, Singleton architecture.
- Expertise in using source code control systems such as **GIT, Version One, JIRA, and Jenkins**.
- Solid experience with Responsive Web Design (RWD) with involvement in several web application development projects
- Expert in Java/JavaScript programming. Experience with **Node Js and React Js**.
- Good experience with web services like **RESTFUL and SOAP**.
- Experience in development tools such as **Babel, Web pack, and NPM**.
- Experience in maintaining Atlassian products like **JIRA**, Confluence, Bamboo etc.
- Experience in creating style guides, best practices and setting UI standards for enterprise/consumer applications.
- Used **Node JS** to run Web pack tasks and build properly the project.
- Used **React JS** to create views to hook up models to the DOM and synchronize data with server as a Single Page Application (SPA).
- Expert in configuring Amazon Web Server (**AWS**) instances and **Azure**.

Education:

- Bachelor's in technology.

WORK EXPERIENCE

Sr. Java Developer
Citco Bank – Toronto, ON

Apr 2023 – present

Description: Citco, also known as the Citco Group of Companies, is a privately owned global hedge fund administrator. It is the world's largest hedge fund administrator. Developing software solutions to assess, monitor, and mitigate risks associated with banking operations, such as credit risk, market risk, and operational risk. This might involve building risk analytics models, integrating them with external data sources, and generating risk

Responsibilities:

- Responsible for Code deployment and maintaining similar code structure on a 4-layer team.
- Requirement should be gathered from Business and **UX team** and develops Angular components based on those.
- Generated UI mockups from paper-and-pencil concepts to high-fidelity prototypes that convey the interaction model using **HTML5, CSS3 and JavaScript**.
- Developed the Cascading Style Sheets (CSS), which gives the entire site a dynamic look.
- Designed dynamic client-side JavaScript codes to build web forms and simulate process for web application, page navigation and form validation.
- Redesigned and developed a web application using **Angular 7** as front-end and **using Web API**.
- Completely redesigned Menu & Navigation to **Angular 7** and updated all the forms across Selling.
- Updated the application with new features of **Angular 6**.
- Implemented Router Module of **Angular 5** to make the whole project a Single Page Application and add routers according to the requirements.
- Worked on some of the new features of **Angular 4** like new if else syntax, ng-templates, form validators, Router etc.
- Worked on **Angular CLI** to deal with troubleshooting and deal with the Angular virtual environment bugs.
- Developed CSS media queries to make the application Responsive Website Design (RWD).
- Worked on the optimization of the **CSS** files using **CSS** preprocessors SASS and LESS.
- Extensively used **CSS** and **Bootstrap** for styling the **HTML** elements.
- Developed the front-end featuring rich web interface implemented using JavaScript library like JQuery.
- Designed the UI, styles, and unique interactive web visualizations on wire frames.
- Worked with **version control GIT** to manage the code repository.
- Used **AJAX, JSON** to send requests to the server to check the functionality of the website.
- Used JSON for storing and exchanging information between browsers and servers.
- Performed Unit testing using Jasmine and Karma.
- Motivates team members and keep management update on team performance.
- Need to manage the **UI team** and assign the work based on requirement and dependencies.
- Worked with teams as a lead where requirements are constantly being implemented, tested and improved.
- Worked closely with product managers, developers, and internal stakeholders throughout the product design.

Environments: JavaScript, Angular 7/6/5/4, HTML5, CSS3, JQuery, Responsive Web Design, SASS, LESS, JSON, Web API, AJAX, Bootstrap, Git, Jasmine, Karma, Agile and Windows.

Description: Access Credit Union is a Canadian credit union, formed by multiple mergers of smaller southern Manitoba credit unions, which provides full daily banking services, loans and mortgages, investment services and business banking. Developing and maintaining the core banking systems that handle essential banking functions such as account management, transaction processing, and customer relationship management. This might involve working with Java EE or Spring frameworks for backend development and database technologies

Responsibilities:

- Participated in various phases of Software Development Life Cycle (**SDLC**) and involved in Agile methods, break tasks into small increments called **SCRUM** with minimal planning.
- Reviews and analyzes functional requirements for identification of data sources and target systems.
- Utilized the front-end technologies including **HTML**, **CSS**, **JavaScript** to layout the front-end pages.
- Used Angular6 to create a Single Page Application (**SPA**). Enhanced application performance by **Angular 6** Component based development in view of future Angular framework transitions.
- Experience with creating custom directives, decorators, and services to interface with both restful and SOA services.
- Implemented Angular Router to enable navigation from one view to the next as customers perform application tasks.
- Responsible for creating efficient design and developing User Interaction screens using **HTML**, **CSS3**, **Bootstrap**, JavaScript, **Angular 6**.
- Developing Restful web service development in Grails.
- Web application development using **jQuery AJAX and angular**
- Responsible for writing the Design Specifications for the generic and application specific.
- Designed and developed Micro Services Architecture to divide application into business components using Spring Boot.
- Converted a monolithic app to microservices architecture using Spring Boot using 12-factor app methodology. Deployed, Scaled, Configured, wrote manifest files for various **Microservices** in PCF.
- Implemented **REST** Microservices using spring boot. Generated Metrics with method level granularity and Persistence using **Spring AOP** and Spring Actuator.
- Implemented Zipkins for distributed **Micro Service** Monitoring. Integrated **Swagger UI** and wrote integration test along with **REST** document.
- Implemented Hysterix a Latency and Fault Tolerance system for Distributed Systems. Wrote Controller, Services and directive code using **Angular 6** for a POC for converting CIM UI.
- Used spring config server for centralized configuration and Splunk for centralized logging. Used Concourse and **Jenkins** for **Microservices deployment**.
- Participate in professional systems analysis projects and work initiatives.
- Securing Spring **REST API** using OAuth2.
- Develop, document and revise system design procedures, test procedures, and quality standards.
- Assists in end user **UAT** cycles and production support to business users. Ensures standards and best practices used in the code development are followed, documented, and maintained.
- The technical environment includes **Java/J2ee** Technologies, **SQL server**, WebLogic, Spring Framework, **SOAP**, Restful **Web Services** and Oracle 12c.
- Built server less application in AWS as backend application by developing and deploying my **Spring Boot** application on **AWS lambda** which monitors and maintains serverless application and **S3** buckets for storage of data.
- Built **S3** buckets and managed policies for **S3** buckets and used **S3** bucket and Glacier for storage and backup on **AWS**.

Environments: Java, HTML5, CSS3, JavaScript, Primefaces, STS, J2EE, Hibernate, Spring framework modules, JSP, Oracle, MongoDB, MVC, Jira, Jenkins, Groovy, Struts, JUnit, Maven, JAX-RS, Log4J, Weblogic12c, Microservices, AWS, Git, Bitbucket, Spring Security.

Description: Great-West Lifeco Inc. is a Canadian insurance-centered financial holding company that operates in North America. Many of the companies it has indirect control over are part of its largest subsidiary, The Canada Life Assurance Company; the other is managed by Great-West Lifeco. Building web-based portals and mobile apps to provide customers with self-service access to their insurance and financial accounts. Java developers would work on both frontend and backend components, ensuring a user-friendly interface and secure access to account information.

Responsibilities:

- Involved in various phases of Software Development Life Cycle (**SDLC**) as requirement gathering, modeling, analysis, architecture design & development and worked with the business team to review the requirements.
- Responsible and involved in complete software development lifecycle (**SDLC**) tasks like designing, coding, testing, and documentation using Agile Scrum Methodology for analysis and design of application.
- Experienced in using **Java/J2EE Design Patterns** including singleton, Factory, **Model View Controller (MVC)**, **Data Access Object (DAO)**, and Business Delegate and well versed with Java 8 Lambda expressions along with Streams for creating internal iteration and performing chain operations such as Filter, Map and core Java concepts like collections, multithreading, serialization.
- Designed the application by implementing JSF Framework based on **MVC Architecture** with EJB, simple Java Beans as a model, **JSP**, **JSF**, Prime Faces components as View and Faces Servlet as a Controller.
- Used JSF framework in developing user interfaces using Prime faces UI Components, Validator, Events and Listeners for handling request processing.
- Designed and developed web applications using JSF, Spring Web Flow, **AJAX** technology and **front-end UI** using JSF, Apache My Faces and Prime Faces UI components.
- Managed business objects, resource management in the business logic tier using Spring Framework.
- Configured Web Application Context as a Context Listener in the web.xml file to Integrating Spring with JSF.
- Configured **Hibernate**, **Spring** and My Faces JSF to map the business objects to **Database** using **XML configuration file**.
- Designed and Developed **SOAP/REST** based Web Services to integrate with other business partners in order to exchange the data and implement request and response objects
- Designed and developed Spring and **REST** based Micro Services using the Spring Boot, also developed RESTful web services with JAX-RS using Spring Boot and Micro Services Architecture.
- Developed Java Beans and Custom Tag Libraries, providing client-side validations in JavaScript and providing interactive front-end GUI using **AJAX**.
- Used Mule ESB to design of routing, error handling, JMS, and VM connection. Deployed Mule applications into MMC (Mule Management Console)
- Used ActiveMQ for reliable and asynchronous exchange of important information for status report and worked on the JMS connection
- Created the Application using **React.js** and **Node.js** libraries **NPM**, gulp directories to generate desired view and flux to root the URLs properly.
- Worked in using React JS components, Forms, Events, Keys, Router, Animations and Flux concept.
- Used React-Autocomplete for creating google map's location search on the webpage Added Excel-Builder to download the Tabular data in Excel format using React.
- Used Open JPA as Object **Relational Mapping ORM Tool** for the backend data persistence.
- Created the necessary keyspaces and modeled column families based on the queries.

Environment: Java, JSF, Servlets, Spring, JAXB, REST, SOAP, Prime Faces, AWS, ActiveMQ, XML, Jenkins, POSTMAN, JavaScript, JQuery, AJAX, Angular JS, React.js, Node.js, MVC, HTML5, CSS3, Eclipse, REST, Junit, Hibernate, PostgreSQL, Cassandra, Agile, Selenium.

Description: Best Buy Inc. is an American multinational consumer electronics retailer. Best Buy relies heavily on its e-commerce platform to sell products online. We worked on developing and maintaining the backend systems that power the website, including product catalog management, order processing, payment processing, and checkout functionality.

Responsibilities:

- Involved in designing of the system using Functional Specification provided by Business Analysts.
- Involved in developing the application built using J2EE technologies like Struts and **Spring MVC Framework**.
- The application is based on JSP, Javascript, Struts 2.0, JSF 2.0, **Hibernate** 3.0, Service Oriented Architecture System Analysis and Design methodology as well as Object Oriented Design and Development using OOAD methodology to capture and model business requirements.
- Involved in Installation and **Configuration of Tomcat, SpringSource Tool Suit, Eclipse, unit testing**.
- Involved in Migrating existing distributed JSP framework to Struts Framework, designed and involved in research of Struts **MVC** framework which fits into our existing framework,
- Developed Ajax framework on service layer for 2 modules as benchmark
- Implemented Service and DAO layers in between Struts and Hibernate.
- Architected an enterprise service bus using Mule, Java (EJB3), **Hibernate, and Spring** to tie back-end business logic/systems with web properties via a corresponding **RESTful API**.
- Used XSLT for transforming XML documents.
- Designed Graphical User Interface (GUI) applications **using HTML5, JSP, JavaScript (jQuery), CSS, and AJAX**.
- Applied MVC pattern of Ajax framework which involves creating Controllers for implementing Classes.
- Refactored, re-architected, and enhanced an existing AngularJS application to follow strict **MVVM/MVC** patterns for improved source code maintenance.
- Designed and developed the UI using Struts view component, **JSP, HTML, CSS, AngularJS and JavaScript**
- Installed, configured, and managed the servers (Amazon Web Services, Linux, Tomcat, Apache, **MySQL, MongoDB**, Groovy/Grails, Hudson/Jenkins, **JIRA, Git, JUnit**, Media Wiki, tripwire, fail2ban, ssh, sendmail, sudo, etc.).
- Experience with React Js to write apps in JavaScript that achieve native performance on mobile devices, used **React Js and AJAX** technologies for front end user input validations.
- Implemented Data Transfer Object for end-to-end remote communication.
- Developed **Java** custom code using **Spring Boot and Rest APIs** to invoke external systems **APIs** to perform in-detail analysis and load to temporary MELD tables.
- Experience with Streaming platforms like **Apache Kafka**.
- Implemented **Micro Services** based **Cloud Architecture** using **Spring Boot**.
- Implemented Spring Framework to loose-couple dependencies. Developed user views using Custom tags in JSPs and data validation using Struts validators.
- Used version control system - perforce visual client used and maintained maven build scripts.
- Involved in fixing bugs and minor enhancements of the modules.

Environments: Java8, java EE 5.0, JDK 1.7, JSP, Struts2, Spring boot, spring MVC, Cucumber, Spring IOC, MVC, Hibernate, OO JavaScript, Ajax, HTML, jQuery, CSS, CSS3, JSON, HTML5, WSDL, ANT, Angular JS, React JS, Oracle 8i/9i/10g/11g, Oracle JDeveloper 10.3, CSS, Eclipse, Web Logic Application Server.

Description: The Home Depot Inc often simply referred to as Home Depot, is an American multinational home improvement retail corporation that sells tools, construction products, appliances, and services, including fuel and transportation rentals. We work on building and maintaining inventory management systems that track products across Home Depot Canada's stores and warehouses. This could involve developing software to manage stock levels, track shipments, and optimize inventory distribution.

Responsibilities:

- Designed, developed, and tested using n-tier J2EE architecture in BEA Weblogic Application Server
- Involved in System Analysis and Design methodology as well as Object Oriented Design and development using OOAD methodology to capture and model business requirements.
- Developed **Servlets and JSPs** based on **MVC** pattern using Struts Action framework.
- Developed EJBs Stateless Session Beans and Entity beans for Savings, Credit Card, Loan, Current account and Mortgage modules.
- Developed web services framework for retrieving User details using Axis.
- Implemented Acegi security for all modules in product which require user authentication and authorization. Password encryption using SRP protocol.
- Designed and developed important application functionalities Download and Install session module for this product.
- Developed Persistence and **DAO** layer implementation using EJB 3.0 ORM for the domain objects involved.
- Development of content management as Struts **MVC** on OpenCms on Jboss for web commerce department.
- Wrote many unit tests using **JUnit** and EasyMock to cover existing functionality and provide a baseline for expansion.
- Designed and developed the Internal Admin module of the product using Struts **MVC** where the administrator can login and configure the product specific configurations to start remote desktop session.
- **Used OO JavaScript and CSS for UI Design Mockup.** Written code in **JQuery/JavaScript /CSS /AJAX** for the navigation-oriented application.
- Designed and developed interfaces using Design Patterns (Like Command, Singleton, Factory, and Controller) in OO **JavaScript**.
- Created Dynamic Integration of jQuery Tab, **JQuery** Grid, and other jQuery component Integration with **Ajax**.
- Extensively used JQuery plug-in like Auto populating select-box, Search plug-in, calendar plug-in, ajax-queue plug-in, and Auto populating multiple select-boxes.
- Implemented Ajax Call, when the user keys in the first few characters of mesh node entries an **AJAX** call is made, and all the matching node entries are retrieved from database as a **JSON** Payload and displayed in a dropdown list box.
- Used Tiles for setting the header, footer and navigation and **Apache** Validator Framework for Form validation.
- Used Log4J logging framework to write Log messages with various levels.
- Created library class for financial calculations of various financial issues like Mortgage, Loans etc.
- Used Ant for starting up the application server in various modes.
- Used Visual Source Safe for version control.

Environments: Java (JDK 1.5), JSP, Servlets, Struts MVC, Struts2, Spring IOC, JavaScript, JQuery, Ajax, HTML, CSS, XML, XSTL, DHTML, Design Patterns, Eclipse, CVS, Apache Tomcat 5.5, JDBC, Oracle 9i/10g, Rational Rose, Xml Spy, UNIX, Windows-XP.

Skill Summary:

Programming Languages Frameworks	Java, J2EE, C, REST, Spring, Hibernate, HTML, Angular JS, NodeJS, AWS
Application/Web Servers	JBOSS 6.x, IBM Web Sphere 6/5, Apache Tomcat 5/6
Methodologies/Design Patterns	OOP, MVC2, Factory pattern, Composite pattern
Databases	Mongo DB, Oracle 10g
IDEs	Eclipse, RSA
Build Automation	Maven, Ant
Testing and Logging Frameworks	JUnit, Arquillian, Log4J
Tools	JIRA, Jenkins, Bug tracking tools (HP QC), Incident management tools(HP SM, Siebel), Gerrit, SOAP UI , Agitar , Toad , SQL Developer, Winscp
Operating Systems	Windows , Unix
